

A guide to how to access the Internet for students newly admitted to dormitory

1. Connect the LAN port on the wall underneath the desk to a computer(laptop) using a LAN cable. **(Never use a router!)**

2. Turn on the PC and start the Internet Explore. 
(Make sure that your PC is set to **Obtain an IP address automatically/Obtain DNS server address automatically** so that it can connect to the Internet without a problem.
If it is not set to **Obtain an IP address automatically**, you will need to change the setting to **Obtain an IP address automatically/Obtain DNS server address automatically** before trying to connect to the Internet.)

3. When a message saying 「**Network use is restricted**」 pops up, register your terminal(PC) by referring to the picture shown below to access the Internet.

※ Registration of a terminal(PC) needs a renewal every three months, and a maximum of two terminals per person can be registered.

The screenshot shows a web browser window with the URL http://www.naver.com/block.bih?ty_lang=ENG8. The page header includes the KNU logo and a language selection menu with 'English' highlighted. The main content area displays a red warning: 'Network use is restricted'. Below this, a message states 'This PC is not registered. Please use after registration.' and features a 'click application' button. A red speech bubble points to a padlock icon on a keyboard. A 'Note' section provides registration details for dormitory students, including validity periods and user ID/password requirements.
